

TMCM-1316 Hardware Manual

Hardware Version V1.20 | Document Revision V1.21 • 2019-APR-15

The **TMCM-1316 StepRocker™ Servo** is a single axis motor controller/driver board for 2-phase bipolar stepper motors. It features the TRINAMIC controller/driver chain consisting of TMC4361 and TMC5160 in combination with an ARM Cortex-M4™ (MK20DX128VLK7) processor. The Module is intended to be a fully functional development platform.

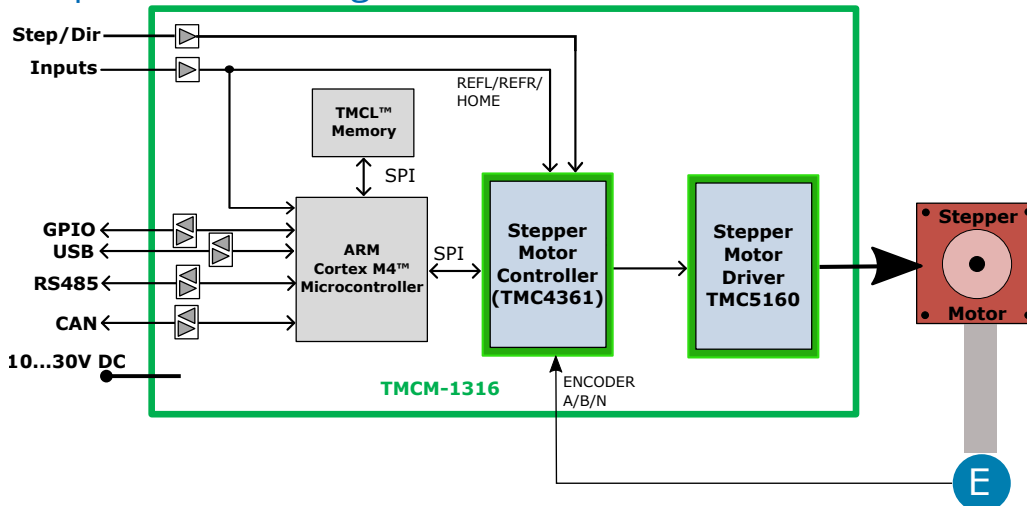

Features

- Single axis controller/driver for 2-phase bipolar stepper motor
- S-shaped ramps + SixPoint™ ramps + linear ramps
- Closed-loop operation with external encoder
- +10...30V DC supply voltage
- Up to 5.7A RMS motor current
- RS485 & USB interface
- Multi-purpose inputs and outputs

Applications

- Laboratory Automation
- Manufacturing
- Robotics
- Factory Automation
- Test & Measurement
- Technology evaluation
- First experiences with stepper motors
- Hobby applications

1 Features

The TMCM-1316 StepRocker™ Servo is a single axis motor controller/driver board for 2-phase bipolar stepper motors. It supports S-shaped ramps in addition to linear ramps and closed-loop operation together with an external encoder. The TMCM-1316 features the TRINAMIC controller/driver chain consisting of TMC4361 and TMC5160 in combination with an ARM Cortex-M4™ (MK20DX128VLK7) processor. The Module is intended to be a fully functional development platform.

Applications

- Highly compact single axis stepper motor controller/driver board for 2-phase bipolar stepper motors

Electrical data

- Supply voltage: +24V DC (+10... +30V DC)
- Motor current: up to 1.1A RMS, 3.4A RMS or 5.7A RMS (can be selected with jumpers)

Mechanical data

- Board size: 85mm x 55mm, height 15mm max. without mating connectors
- 4 mounting holes for M3 screws

Interfaces

- RS485 host interface
- USB 2.0 host interface (USB micro-B connector)
- Step/Dir input (TTL level)
- Step/Dir output (+5V TTL level) for synchronisation (master-slave axes)
- 3 multi-purpose inputs (can be used for ABN-encoder)
- STOP_L, STOP_R and HOME inputs
- START input for synchronized motion with several axes
- 6 multi-purpose I/Os
- 2 open-drain outputs
- 1 analog input (0...10V)
- μ C programming interface SWD (single wire debug / pads on PCB)
- Retro-fit option: CAN 2.0B communication interface

Features

- TMC4361 stepper motor controller IC for on-the-fly alteration of many motion specific parameters, linear, SixPoint™, and S-shaped ramp and closed-loop support
- TMC5160 advanced stepper motor driver IC with stallGuard2™ and coolStep™ features. Using the spreadCycle™ chopper the μ step current sine wave is well formed with smooth zero crossing. stealth-Chop2™ can be selected for quiet operation and smooth movements.
- Up to 256 microsteps per fullstep through mircoPlyer™ technology
- EEPROM

Software

- TMCL™ remote (direct mode) and standalone operation (memory for up to 1024 TMCL™ commands)
- Fully supported by TMCL-IDE (PC based integrated development environment)

2 Order Codes

The standard version of the StepRocker™ Servo has RS485 and USB interfaces (CAN transceiver **not** assembled).

The module is pre-programmed with TRINAMICs TMCL™ firmware with all available features.

TMC-1316 Order Code		
Order Code	Description	Size (LxWxH)
TMC-1316 StepRocker_Servo	1-axis bipolar stepper motor controller/-driver module with RS485 and USB, 5.7A RMS, +24V	85mm x 55mm x 15mm

Table 1: TMC-1316 Order Code

3 Mechanical and Electrical Interfacing

3.1 Size of board

The board with the controller/driver electronics has an overall size of 85mm x 55mm x 15mm without mating connectors. It offers four mounting holes for M3 screws (3.2mm diameter). All four mounting holes are connected to the ground plane (signal and supply ground) of the module.

Figure 1: Board Dimensions and Positions of Mounting Holes (all Values in mm)

4 Connectors

The TMCM-1316 StepRocker Servo has nine connectors altogether. There are two screw connectors for power and motor and two interface connectors (micro-USB and RS485). Furthermore, the StepRocker Servo has one connector for reference and home switches and synchronisation signal (START), one step/direction input connector (TTL level) and one output connector and the GPIO connector, which can be used e.g. for connecting an ABN-encoder.

NOTICE

Start with power supply OFF and do not connect or disconnect motor during operation! Motor cable and motor inductivity might lead to voltage spikes when the motor is (dis)connected while energized. These voltage spikes might exceed voltage limits of the driver MOSFETs and might permanently damage them. Therefore, always switch off / disconnect power supply or at least disable driver stage before connecting / disconnecting motor.

Figure 2: TMCM-1316 StepRocker Servo Connectors

Connector Types and Mating Connectors		
Connector	Connector type on-board	Mating connector type
Power	RIA 220-02, 2 pin, 5.08mm pitch, shrouded header	RIA 249-02, screw type terminal block, pluggable, centerline 5.08mm pitch
Motor	RIA 183-04, 4 pin, 3.5mm pitch, shrouded header	RIA 169-04, screw type terminal block, pluggable, centerline 3.5mm pitch
USB	USB-micro-B female connector	USB-micro male connector

Connector	Connector type on-board	Mating connector type
RS485/CAN	Low profile box header without locking bar, type 8380, 10 pin, DIN 41651, 2.54mm pitch	Low profile IDC socket connector, 10 pin, DIN 41651, 2.54mm pitch
GPIO	Header, double row, 14 pin, 2.54mm pitch	Female connector with 2.54mm pitch
STOP_L, STOP_R, HOME, START	Header, 5 pin, 2.54mm pitch	Female connector with 2.54mm pitch
Step/Dir In	Header, 3 pin, 2.54mm pitch	Female connector with 2.54mm pitch
Step/Dir Out	Header, 3 pin, 2.54mm pitch	Female connector with 2.54mm pitch
+5V output	Header, 2 pin, 2.54mm pitch	Female connector with 2.54mm pitch

Table 2: Connector Types and Mating Connectors of the TMC-1316 StepRocker Servo

4.1 Power Connector

Power Supply Connector Pin Assignment			
Pin	Label	Direction	Description
1	GND	Power (GND)	Common system supply and signal ground
2	12...30V	Power (input)	Power supply voltage

Table 3: Power Supply Connector Pin Assignment

NOTICE

Do not connect or disconnect motor during operation! Motor cable and motor inductivity might lead to voltage spikes when the motor is (dis)connected while energized. These voltage spikes might exceed voltage limits of the driver MOSFETs and might permanently damage them. Therefore, always switch off / disconnect power supply or at least disable driver stage before connecting / disconnecting motor.

NOTICE

Take care of polarity, wrong polarity can destroy the board!

4.2 I/O Connector (Microcontroller)

The TMC-1316 offers an on-board ARM Cortex-M4™ microcontroller with +3V3 powered IOs and +5V tolerant inputs. In order to be compatible with previous generations of the module, +5V output level-shifters/buffers have been integrated on-board. This way, all general purpose IO pins configured as outputs will deliver +5V TTL signals.

GPIO Connector Pin Assignment			
Pin	Label	Direction	Description
1	GND	Power (GND)	Supply and signal ground
2	GND	Power (GND)	Supply and signal ground
3	PWMD_0	in/out	General purpose I/O (+5V compatible, default: input)
4	PWMU_0	in/out	General purpose I/O (+5V compatible, default: output)
5	PWMD_1	in/out	General purpose I/O (+5V compatible, default: input)
6	PWMU_1	in/out	General purpose I/O (+5V compatible, default: output)
7	PWMD_2	in/out	General purpose I/O (+5V compatible, default: input)
8	PWMU_2	in/out	General purpose I/O (+5V compatible, default: output)
9	AIN_0	in	Analog input Input voltage range: 0...+10V Resolution: 12bit (0...4095)

Pin	Label	Direction	Description
10	PHASE_A	in	Encoder input channel A (+5V compatible, internal pull-up to +5V)
11	OpenDrain_1	out	Open-drain output (max. 100mA)
12	PHASE_B	in	Encoder input channel B (+5V compatible, internal pull-up to +5V)
13	OpenDrain_2	out	Open-drain output (max. 100mA)
14	PHASE_Z	in	Encoder input zero channel (+5V compatible, internal pull-up to +5V)

Table 4: I/O Connector Pin Assignment

4.3 Motor Connector

The motor has to be connected to the motor connector, one phase (phase A) between A1 and A2 and the second phase (phase B) between B1 and B2.

Motor Connector Pin Assignment			
Pin	Label	Direction	Description
1	B1	out	Pin 1 of motor coil B
2	B2	out	Pin 2 of motor coil B
3	A1	out	Pin 1 of motor coil A
4	A2	out	Pin 2 of motor coil A

Table 5: Motor Connector Pin Assignment

NOTICE

Do not connect or disconnect motor during operation! Motor cable and motor inductivity might lead to voltage spikes when the motor is (dis)connected while energized. These voltage spikes might exceed voltage limits of the driver MOSFETs and might permanently damage them. Therefore, always switch off / disconnect power supply or at least disable driver stage before connecting / disconnecting motor.

4.4 STOP_L, STOP_R, HOME and START connector pin assignment

STOP_L, STOP_R, HOME and START connector pin assignment			
Pin	Label	Direction	Description
1	GND	Power (GND)	Signal and system ground
2	STOP_L	in	Input for left stop/limit switch
3	STOP_R	in	Input for right stop/limit switch
4	HOME	in	Input for home/reference switch

Pin	Label	Direction	Description
5	START	in	Input for start signal (master / slave synchronisation)

Table 6: STOP_L, STOP_R, HOME and START Connector Pin Assignment

4.5 Step/Dir Input Connector Pin Assignment

Step/Dir Input connector pin assignment			
Pin	Label	Direction	Description
1	GND	Power (GND)	Signal and system ground
2	STEP_IN	in	Input for step pulse signal
3	DIR_IN	in	Input for direction signal

Table 7: Step/Dir Input Connector Pin Assignment

4.6 Step/Dir Output Connector Pin Assignment

Step/Dir Output connector pin assignment			
Pin	Label	Direction	Description
1	GND	Power (GND)	Signal and system ground
2	STEP_OUT	in	Output for step pulse signal
3	DIR_OUT	in	Output for direction signal

Table 8: Step/Dir Output Connector Pin Assignment

4.7 RS485 and CAN Connector

The standard TMCM-1316 StepRocker Servo offers the RS485 interface, only.

RS485/CAN Connector Pin Assignment			
Pin	Label	Direction	Description
1			
2			
3	CAN_L	bi-directional	differential CAN bus signal (inverting) - retro-fit option
4	CAN_H	bi-directional	differential CAN bus signal (non-inverting) - retro-fit option
5	GND	Power (GND)	Signal and system ground
6	RS485+	bi-directional	differential RS485 bus signal (non-inverting)
7	RS485-	bi-directional	differential RS485 bus signal (inverting)

Pin	Label	Direction	Description
8			
9			
10			

Table 9: RS485/CAN Connector Pin Assignment

4.7.1 Upgrade the StepRocker Servo for CAN communication

The table above shows the pin configuration for CAN, too. Before starting with CAN it is necessary to solder a TJA1050T CAN transceiver with housing SOIC8 and a 0.1 μ capacitor with housing 0603 on the TMCM-1316 StepRocker Servo. Afterwards, the StepRocker Servo is ready for using the CAN interface.

Because of the pin assignment CAN and RS485 can be used at the same time.

Please note: it is not necessary to remove the RS485 transceiver.

4.8 USB Connector

A USB interface is available via a micro-USB connector. This module supports USB 2.0 Full-Speed (12Mbit/s) connections.

USB Connector Pin Assignment			
Pin	Label	Direction	Description
1	VBUS	Power (+5V input)	+5V supply from the host
2	D-	bi-directional	USB Data-
3	D+	bi-directional	USB Data+
4	ID		Connected to signal and system ground
5	GND	Power (GND)	Signal and system ground

Table 10: USB Connector Pin Assignment

4.9 Microcontroller Programming Interface

The programming pads for the microcontroller are located on the bottom side of the module. They are connected directly to the related processor pins - resp. GND or on-board generated +3V3 supply. These pins are used for programming of the bootloader and firmware during production + testing of the module.

Programming Pads		
Pin	Label	Description
1	GND	Module and signal ground
2	+3V3	+3V3 DC supply - generated on-board
3	nRST	Hardware reset input
4	SWDIO	Serial wire data I/O
5	SWDCLK	Serial wire clock

Table 11: Programming Pads on Bottom of the PCB

5 Jumper Settings

The TMCM-1316 StepRocker Servo offers a number of jumpers for selection of different settings in hardware.

Figure 3: Jumper Settings of the TMCM-1316 StepRocker Servo

Jumpers of the TMCM-1316 StepRocker Servo		
Jumper	Label	Description
Select motor current	Jumper removed	Jumper removed: motor current up to 1.1A RMS
	Jumper pin 1-2	1 Jumper populated (pin 1-2): motor current up to 3.4A RMS
	Jumper pin 1-2 and 3-4	2 Jumper populated (pin 1-2 and pin 3-4): motor current up to 5.7A RMS

Table 12: Jumpers of the TMCM-1316 StepRocker Servo

6 LEDs

LED Description		
Status	Label	Description
Power on	+5V	This orange LED lights up upon the power supply is available
LED1 without pre-defined functionality	LED1	This yellow LED can be used customer specific. This LED is connected to PTA5 (pin 31) of the MK20DX128VLK7 microcontroller.
LED2 without pre-defined functionality	LED2	This yellow LED can be used customer specific. This LED is connected to PTE5 (pin 6) of the MK20DX128VLK7 microcontroller.
TMC5160 diagnosis output 0	DIAG_0	This green LED lights up if the DIAG 0 output of the TMC5160 is pulled low.
TMC5160 diagnosis output 1	DIAG_1	This green LED lights up if the DIAG 1 output of the TMC5160 is pulled low.

Table 13: LED Description

Figure 4: TCM-1316 LEDs

7 Communication

7.1 RS485

For remote control and communication with a host system the TMCM-1316 provides a two wire RS485 bus interface. For proper operation the following items should be taken into account when setting up an RS485 network:

1. **BUS STRUCTURE:**

The network topology should follow a bus structure as closely as possible. That is, the connection between each node and the bus itself should be as short as possible. Basically, it should be short compared to the length of the bus.

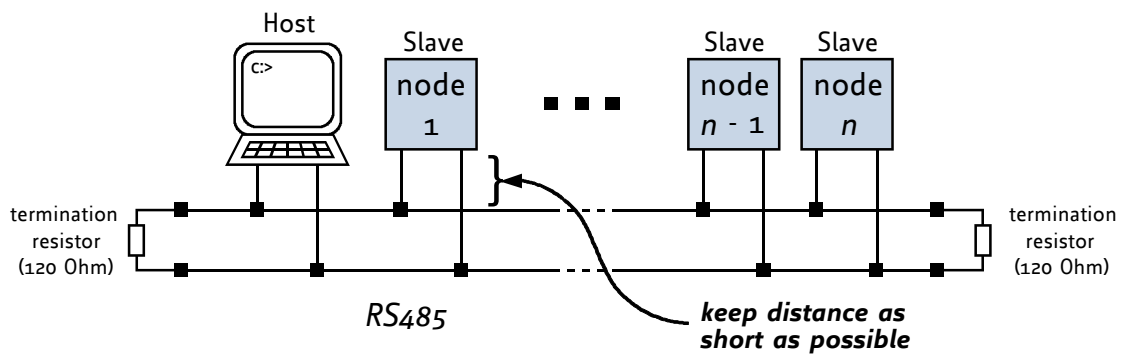

Figure 5: RS485 Bus Structure with Termination Resistors

2. **BUS TERMINATION:**

Especially for longer busses and/or multiple nodes connected to the bus and/or high communication speeds, the bus should be properly terminated at both ends. The TMCM-1316 does not intergate any termination resistor. Therefore, 120 Ohm termination resistors at both ends of the bus have to be added externally.

3. **NUMBER OF NODES:**

The RS485 electrical interface stadard (EIA-485) allows up to 32 nodes to be connected to a single bus. The bus transceiver used on the TMCM-1316 units (SN65HVD3082ED) has just 1/8th of the standard bus load and allows a maximum of 256 units to be connected to a single RS485 bus.

4. **NO FLOATING BUS LINES:**

Avoid floating bus lines while neither the host/master nor one of the slaves along the bus line is transmitting data (all bus nodes switched to receive mode). Floating bus lines may lead to communication errors. In order to ensure valid signals on the bus it is recommended to use a resistor network connecting both bus lines to GND resp. +5V. In contrast to the termination resistors this network is normally required just once per bus. Certain RS485 interface converters available for PCs already include these additional resistors (e.g. USB-2-485).

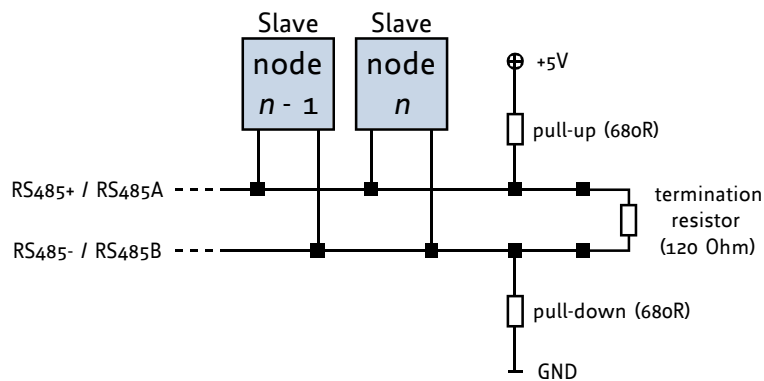

Figure 6: RS485 Bus Lines with Resistor Network

7.2 USB

For remote control and communication with a host system the TMCM-1316 StepRocker Servo provides a USB 2.0 full-speed (12Mbit/s) interface (mini-USB connector). As soon as a USB-Host is connected the module will accept commands via USB. The TMCM-1316 supports USB self powered operation (External power supplied via the power supply connector) and USB bus powered operation, also (no external power is supplied via the power supply connector). During USB bus powered operation, only the core digital circuit parts will be operational. That is, the microcontroller itself and also the EEPROM. Of course, any motor movement will not be possible in this mode. This mode has been implemented in order to enable configuration / parameter setting / read-out, firmware updates etc. by just connecting a USB cable between the module and a host PC. No other connection / additional power supply is required.

7.3 CAN (Retro-fit Option)

For remote control and communication with a host system the TMCM-1316 StepRocker Servo can be equipped with a CAN bus interface. Please note, that it is necessary to add CAN transceiver and filter capacitor first for the standard TMCM-1316 StepRocker Servo version (see 4.7.1).

For proper operation the following items should be taken into account when setting up a CAN network:

1. BUS STRUCTURE:

The network topology should follow a bus structure as closely as possible. That is, the connection between each node and the bus itself should be as short as possible. Basically, it should be short compared to the length of the bus.

Figure 7: CAN Bus Structure with Termination Resistors

2. *BUS TERMINATION:*

Especially for longer busses and/or multiple nodes connected to the bus and/or high communication speeds, the bus should be properly terminated at both ends. The TMCM-1316 does not integrate any termination resistor. Therefore, 120 Ohm termination resistors at both ends of the bus have to be added externally.

8 Functional Description

The TMC-1316 is a highly integrated single axis controller/driver module for stepper motors. The TMC-1316 can be controlled via RS485 or USB serial interfaces (CAN retro-fit option).

The TMC-1316 comes with the PC based software development environment TMCL-IDE for the Trinamic Motion Control Language (TMCL™). Using predefined TMCL™ high level commands like *move to position* a rapid and fast development of motion control applications is guaranteed. Whereas the boot loader is installed during production and testing at TRINAMIC and remains usually untouched throughout the whole lifetime, the firmware can be updated by the user.

Communication traffic is kept low since all time critical operations, e.g. ramp calculation, are performed on-board. Full remote control of the device with feedback is possible. The firmware of the module can be updated via any of the serial interfaces.

The TMC-1316 module contains the following main components:

- Microcontroller (ARM Cortex-M4™, MK20DX128VLK7), responsible for overall control and communication
- TMC4361 highly integrated advanced stepper motor controller. Supports linear and S-shaped ramps. Together with an external encoder closed-loop operation is supported.
- TMC5160 advanced stepper motor driver IC with stallGuard2™ and coolStep™ with MOSFET driver stage (8x NMOSFETs for bipolar stepper motor)
- RS485 and USB transceivers
- On-board voltage regulators (+5V and +3V3) required for supply of all on-board digital circuits

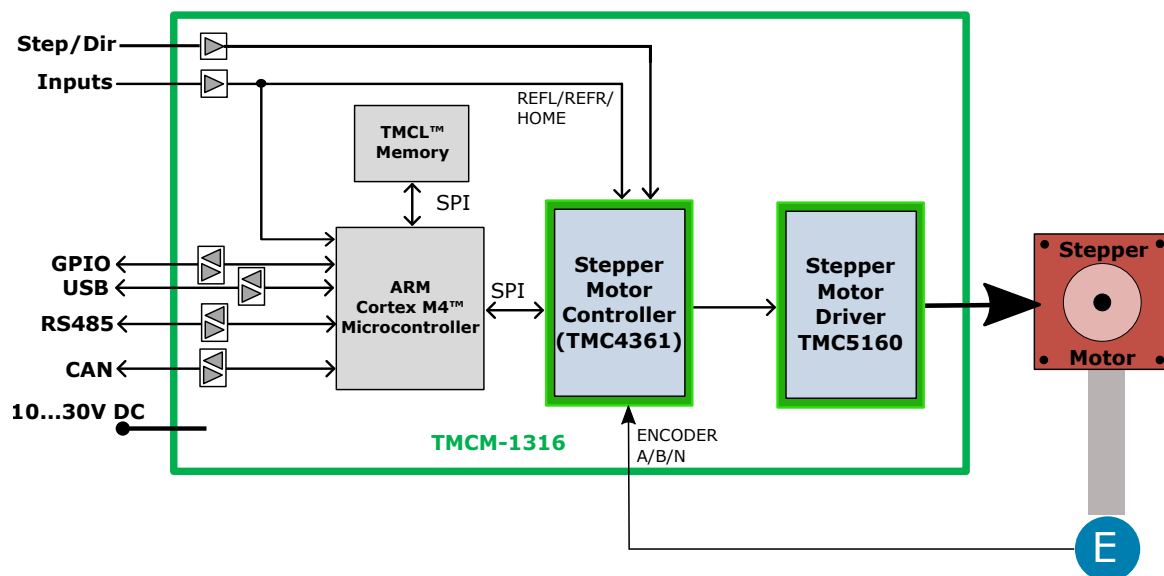

Figure 8: TMC-1316 Block Diagram

9 Operational Ratings and Characteristics

NOTICE

Never Exceed the absolute maximum ratings! Keep the power supply voltage below the upper limit of +30V! Otherwise the board electronics will seriously be damaged! Especially, when the selected operating voltage is near the upper limit a regulated power supply is highly recommended.

General Operational Ratings					
Symbol	Parameter	Min	Typ	Max	Unit
V _{Power}	Power supply voltage	10	24	30	V
V _{USB}	Power supply via USB connector		5		V
I _{USB}	Current withdrawn from USB supply when USB bus powered (no other supply connected)		80		mA
I _{COIL}	Motor coil current for sine wave peak (chopper regulated, adjustable via software)	0		1.6 or 4.8 or 8.1	A
I _{MC}	Continuous motor current (RMS)	0		1.1 or 3.4 or 5.7	A
T _{ENV}	Environmental temperature at rated current (no forced cooling required)	-25		50	°C

Table 14: General Operational Ratings of the Module

Operational Ratings of the RS485 Interface					
Symbol	Parameter	Min	Typ	Max	Unit
N _{RS485}	Number of nodes connected to single RS485 network			256
